Application/Control Number: 09/810,469

Art Unit: 2624

DETAILED ACTION

Drawings

- 1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the rotating direction and rotating the output of the tone processing means; must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.
- 2. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

- 3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
- 4. The disclosure is also objected to under 37 CFR 1.71, as being so incomprehensible as to preclude a reasonable search of the prior art by the examiner. For example, the following items are not understood: Specification, page 10, lines10-20 disclosed rotating means for rotating the output of the tone processing means and the tone processing means outputs binary areal tones. Tones are grayscale values. It is unclear how the binary (1s and 0's) values are rotated. To be more precise, in electrical

Application/Control Number: 09/810,469

Art Unit: 2624

computers, all the binary values are electrical voltages or current. The true output of the tone processing means are current and voltages; it is unclear how the voltages and the current are rotated.

5. Applicant is required to submit an amendment which clarifies the disclosure so that the examiner may make a proper comparison of the invention with the prior art.

Applicant should be careful not to introduce any new matter into the disclosure (i.e., matter which is not supported by the disclosure as originally filed).

A shortened statutory period for reply to this action is set to expire ONE MONTH or THIRTY DAYS, whichever is longer, from the mailing date of this letter.

Claim Rejections - 35 USC § 112

6. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

7. Claims 1-3 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. For example, the claims are claiming rotating means for rotating the output of the tone processing means. Specification defines tone processing means outputs binary areal tones. Tones are grayscale values. It is unclear how the binary (1s and 0's) values are rotated. To be more precise, in electrical computers, all the binary values are electrical

Art Unit: 2624

voltages or current. The true output of the tone processing means are current and voltages; it is unclear to one skill in the art how the voltages and the current are rotated, in the invention.

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to King Y. Poon whose telephone number is (703) 305-0892
